

# Intro2SE – Requirements Analysis – GroupID

## Project Name

The student team is required to complete the Software Requirements Specification (SRS) document for the assigned course project, following the attached template.

Software Engineering Department  
Faculty of Information and Technology  
VNU-HCMUS

# Table of Contents

|                                  |   |
|----------------------------------|---|
| Objectives                       | 1 |
| 1 Member Contribution Assessment | 2 |
| 2 Problem Statement              | 3 |
| 3 Requirements Overview          | 4 |
| 4 Requirements Analysis          | 5 |
| 5 AI Usage Declaration           | 6 |
| 6 Presentation                   | 7 |

# Software Requirements Specification

## Objectives

This document focus on the following topics:

- ✓ Completing the Software Requirements Specification (SRS) document with the following contents:
  - Elaborate on the Problem Statement
  - Overview of Requirements (Functional and Non-Functional), Stakeholders
  - Use Case Model
  - Use Case Specifications
  - Create Prototype and Mockup Diagrams of the System Interface
- ✓ Understanding the Project Requirement Analysis document.
- ✓ This document will be used as input for AI tools to verify the quality of subsequent project artifacts.

All project artifacts must remain consistent and synchronized.

For example, if the project proposal is modified during this phase, a new version of the proposal must be documented.

By the conclusion of the project, all versions of every artifact must be submitted to demonstrate the evolution of your work.

# 1 Member Contribution Assessment

StudentID 1 – Fullname 1 – Contribution (%)

- Task Evidence: Provide a comprehensive list of tasks managed via Jira (or a similar project management tool). For each entry, include: Task Details: Task name and a descriptive summary of the work performed. Visual Evidence: Clear screenshots that explicitly show the Task Name, Assignee, Status, Assigned Date, and Completion Date.

StudentID 2 – Fullname 2 – Contribution (%)

- Task Evidence

Each task must be assigned to and completed by only one student.

The sum of all student contributions is less than or equal to 100%.

# 2

## Problem Statement

- Students describe the project here, providing an approximately 1-2 page(s) business description of the software problem, including the operating environment (e.g., Web browser supporting HTML5, server: Apache...) and design & implementation constraints (e.g., Java programming language, Oracle database, documentation standards...).

# 3

## Requirements Overview

### 3.1 Stakeholders

The student team should list (or draw a Context Diagram) and explain the role of each Stakeholder of the software.

| STT | Stakeholder     | Description |
|-----|-----------------|-------------|
| 1   | Project Sponsor |             |
|     |                 |             |
|     |                 |             |

### 3.2 Requirements

#### 3.2.1. Functional Requirements Specification

[Describe the functional requirements of the system using natural language. The combination of forms and regulations is acceptable. **Number and group the requirements accordingly**]

#### 3.2.2. Non-Functional Requirements Specification

[Describe the non-functional requirements of the system using natural language]

# 4

## Requirements Analysis

### 4.1 Use Case model

Use Case Diagram of the system (students can draw using software such as StarUML, Visio, Rational Rose, mermaidjs, ...)

### 4.2 Use Case Specification

Use cases must be presented in order of their importance or according to the logical flow of the use case workflow.

#### 4.2.1. Name of Use Case 1

| Use case ID                | U001 |
|----------------------------|------|
| Use Case                   |      |
| Brief Description          |      |
| Actor                      |      |
| Pre-Condition              |      |
| Result                     |      |
| Main Scenario              |      |
| Alternatice Scenarios      |      |
| Non-Functional Constraints |      |

Please provide the prototype or mockup for Use Case 1 here. Students are encouraged to leverage AI-supported prototyping tools such as Figma, Stitch, Pencil, or similar platforms.

# 5

## AI Usage Declaration

Based on the provided AI Usage Guideline document, teams must submit their AI usage declaration here. Students are encouraged to leverage AI tools creatively and effectively in this project.

# 6

## Presentation

Teams are required to record presentation videos of their work using the provided template.

Every team member must participate in the presentation, specifically covering the sections their contributed to the project.

Videos must not exceed 30 minutes.

Please upload your videos to Youtube (set to either Unlisted or Public).

Provide the Youtube links the the field below.
